INSPIRED BY COMFORT

## The choice is now yours

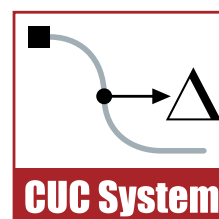

At Dometic, we pride ourselves as system suppliers and experts in professional in-room marketing, which is essential to satisfy your guest needs. **SILENT Absorption** miniBars marked the beginning of our long-standing business partnership with hotels around the globe and now Dometic have introduced our **Compressor** miniBar range. Enjoy the benefit of choice without compromising style or functionality for your guest room requirements.

### Dometic miniBars feature:

- All refrigerator – no freezer.\*
- High performance technology.
- Shelf space and configuration to suit your guest room.
- Integration for building into joinery.
- Sensor-controlled surveillance of the cooling unit (CUC System) in all absorption models.
- Fuzzy Logic temperature control for energy management.

Saves energy and cuts your operating cost: Fuzzy Logic II with integrated CUC system.

Dometic, true to its heritage as the industry's leading innovator, continues to launch new products and design concepts to give your hotel a cutting edge over your competitors. Dometic... Style you expect

\* EA3280 miniCool is the only model which contains a freezer

## ecoLine absorption range

### The economic solution for your hotel

The Dometic ecoLine range is compact outside and spacious inside. This miniBar range provides maximum reliability and the longest life time when compared with other absorption miniBars available in the market. Incorporating fuzzy logic to save energy – a significant cost factor for hotels. All in all, the Dometic ecoLine range is an investment that pays back.

<b>Weight</b>	6.5 kg
<b>Power source</b>	12 V DC/240 V AC
<b>Cooling control</b>	Digital selection from 5 °C to 20 °C
<b>Availability</b>	Ex stock

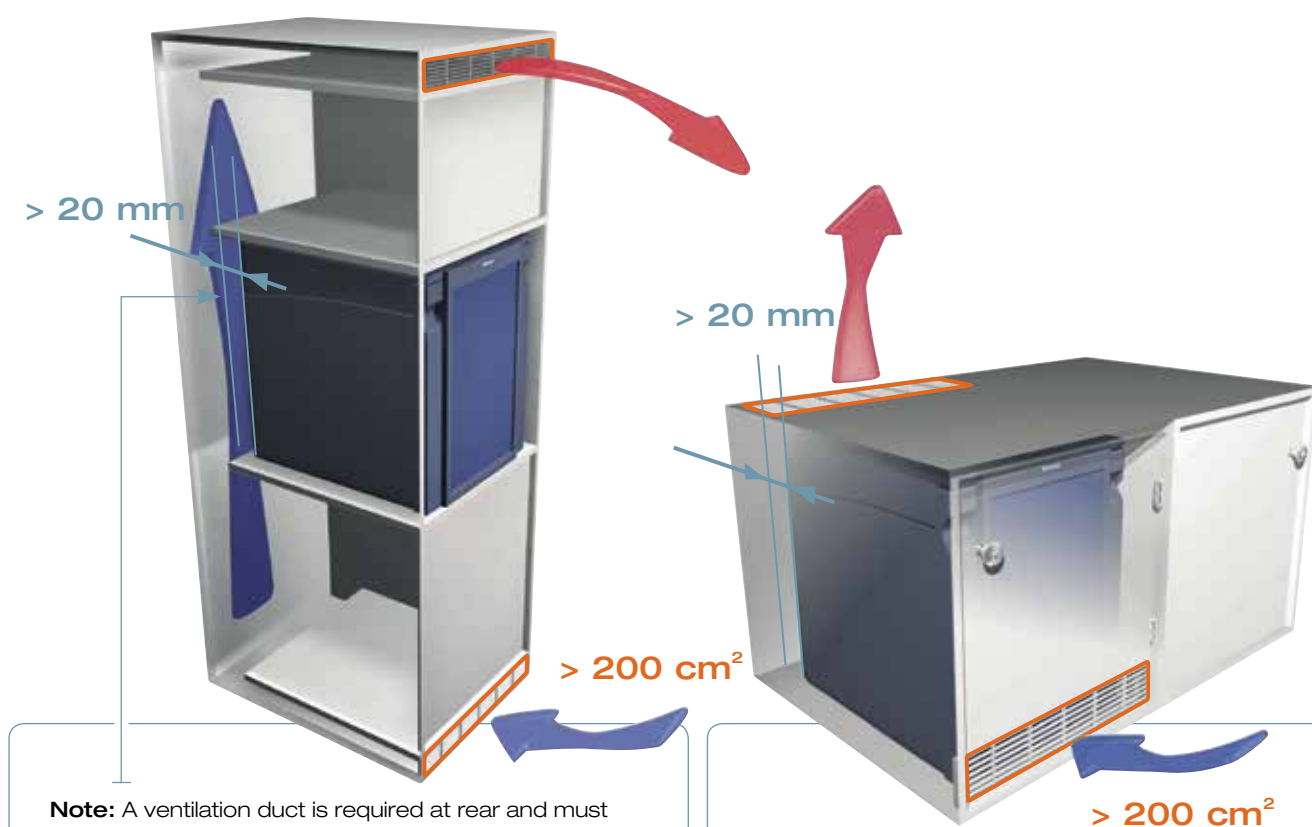

# How to provide proper ventilation

Correct ventilation is essential for the proper cooling performance of a built-in miniBar. During the cooling process heat is generated at the condenser fins on the back of the unit, which must be dissipated to the outside with sufficient airflow. If there is not enough space for the air to leave, the cooling performance will drop down and the energy consumption will rise. Incorrect ventilation can also impair the miniBar's longevity.

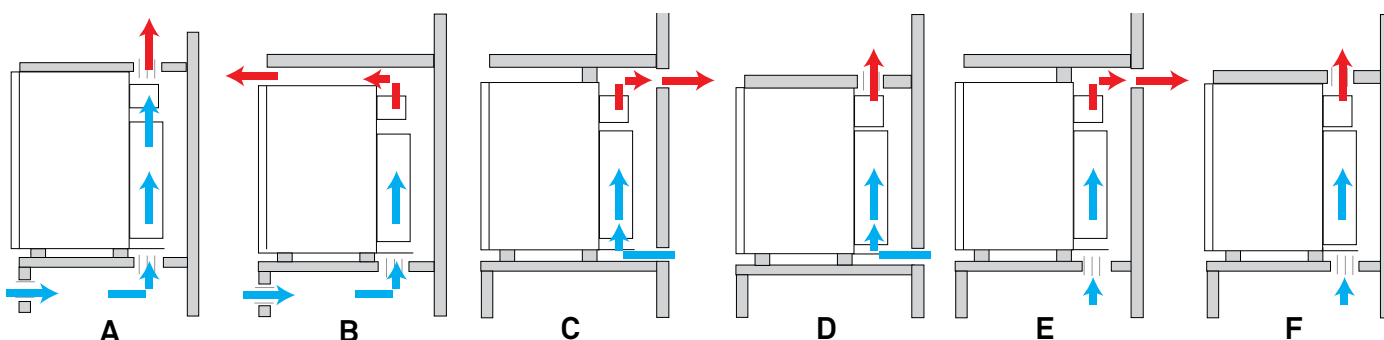

To get the best performance the miniBar needs at least 200 cm<sup>2</sup> free air inlet and this space should be the air outlet. Behind the cabinet rear please leave minimum 20 mm distance to the furniture wall.

**Note:** A ventilation duct is required at rear and must measure at least 105 mm x the width of the refrigerator.

Sufficient ventilation can be accomplished even in furniture that reaches higher up. For cooling purposes, the air needs to flow freely around the cooling unit and exit unhindered at the top.

An air grille integrated in the furniture door ensures sufficient ventilation. Both miniBar and furniture door can be connected via a sliding hinge which opens furniture and miniBar door simultaneously.

## In Room Safes

When it comes to the valuables of guests, hotels of all categories worldwide place their trust in the experience of a market leader. Dometic is the leading supplier for comfort hotel room equipment. Extensive research and development culminates in a product range to suit all room types and meet the brand standard required by many global operators.

### Choose from:

#### X Series

Three models offering all the security features you would expect yet with simple and secure operation. A value for money safe that blends with every interior.

#### Premium

With a contemporary stylish design and enhanced security features including the latest Anti-Tamper System, the new **proSafe** range goes one step further in terms of functionality, technology and security.

## Dometic proSafe

### Premium range

- the digital memory of audit trials

All operations effected on a safe must be documented – for your own security and for your insurance provider. This is where Dometic's iAudit system offers a truly convenient solution. All **proSafe** MD models feature a special microchip with storage capacity for up to 1,000 events. That means: Any operation (locking, unlocking, emergency opening requests etc.) can be tracked and audited anytime – even over a number of years. The information is transferred from the safe to a protected server via the Dometic SD card device, which works with common SD cards. All **proSafe** MD models have a matching interface for connection to the SD card reader. The audit protocol can be printed out any time, simply by using your PC's printer. Thus avoiding special audit trail printers.

#### Battery check with a touch of a button

Each Dometic **proSafe** comes as an install-and-go package complete with batteries. To ensure reliable safe operation the batteries must be checked on a regular basis and replaced in good time. And that's an easy task with the **proSafe** range: Just enter the four-digit code on the operating panel, and the current battery status appears on the display. At a battery level of 4.4 volts (or below) the display shows the "bAt-Lo" warning. At this charging status the safe can only be opened but not be closed – an additional security feature.

# Dometic proSafe

## High security features

Dometic offers three emergency opening options.

- Option 1:** Authorised staff open the safe with a **masterkey**.
- Option 2:** Authorised staff enter a mastercode to open the safe.  
After 10 seconds the safe will open automatically.
- Option 3:** The **webREOS** system, designed for ultimate security and user comfort.

## Anti-Tamper System

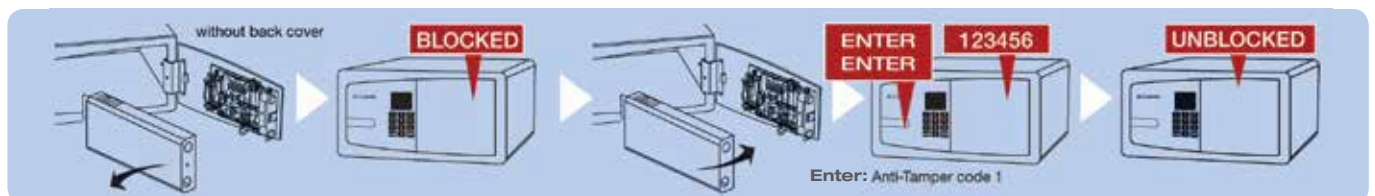

With the Anti-Tamper system, Dometic provides an unparalleled security feature for all of our new **proSafe** models. This option will further secure the guest's valuables and will report to the hotel any tampering attempt on the safe at any given time of day and night.

Master key with Anti-Tamper System

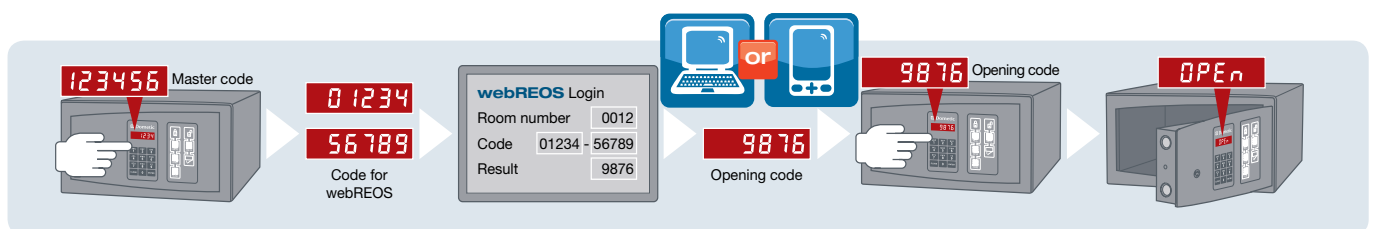

Back cover with Anti-Tamper System

## SAM - Safe Management

**SAM** with **webREOS**, the Dometic **R**emote **E**mergency **O**pening **S**ystem, is based on an innovative encryption system. This unique solution combines the advanced electronic system integrated in all **proSafe** premium models with the latest on-line technology. In case of emergency, an authorised staff member enters the **REOS** Code on the safe's keypad. As a result the safe generates a 10-digit code to be entered on a password protected webpage. The screen finally shows the emergency access code which can be used to open the safe. Each **REOS** opening is recorded and stored on a protected server.

Three easy steps to secure emergency opening: mastercode – two 5-digit codes – opening code

## MD 282

**NEW**

Model also comes in white finish

<b>Capacity</b>	8.3 litres
<b>Laptop compatible</b>	No
<b>Dimensions</b>	<b>W</b> 280 x <b>H</b> 165 x <b>D</b> 235 mm

## Fixing kit

included with every safe

Both the premium range and X series safes have factory-drilled holes at the rear and base. They can be screw-fastened from inside the cabinet to a wall or horizontal surface. In either case, the fixing kit provides a firm hold and flawless finish.

- Made of high resistance Polypropylene with two metallic bolts inserted
- Every Fixing Kit comes in a plastic bag with two fixing screws M8 x 40 and one Allen key for easy and fast installation

## CEU OPTION

The CEU option includes the easy to use hand held unit that allows the setting of date/time, opening of the safe without a mechanical key, setting the Mastercode and also an Audit Trail.

## Dometic GROUP. The satisfaction network

When it comes to minibars, Dometic is the undisputed global market leader. More than 4.5 million units have been installed in all leading hotels worldwide – a track record that speaks for itself. As a competent partner for successful in-room marketing, we offer solutions for every hotel.

Operating a worldwide distribution network with offices in more than 100 countries, we provide personal on-site support and comprehensive customer service. All Dometic products come from ISO 14001- and ISO 9001-certified production sites.
